Powering Business Transformation™

THE ASPIRE CYBERSECURITY READINESS INITIATIVE

TRANSFORMING CYBERSECURITY

Aspire Cybersecurity Services help you manage the way you protect your network and respond to threats. We help you build your cybersecurity posture to keep the bad actors out and protect your data.

We offer:
- Aspire Managed Security Services
- Aspire Managed Detection and Response (MDR)
- Managed Collaboration Services
- Aspire Managed Infrastructure Services

We deliver:
- 24/7/365 domestically based SOC-2 Certified NSOC
- Experienced Incident Responders
- Certified Expert level engineering team
- Dedicated Success Team

TACKLING CYBERSECURITY RISKS AND THREATS TO CRITICAL INFORMATION SYSTEMS AND PHYSICAL FACILITIES

Cybersecurity threats and attacks are on the rise. From compromised software supply chains to targeted attacks against on-premise servers to hacked sensitive files, criminal ransomware groups have attacked multiple government and private facilities – including the well-publicized shutdown of a private pipeline and hacking of numerous government services websites and state portals.

To help you prepare for such threats and attacks, Aspire created a four-step Cybersecurity Readiness Initiative that assesses your environment to identify weaknesses in your cyber defenses and develop specific measures required to improve and optimize your security posture.

✔ **Assessment of Current Environment and Vulnerabilities**
Aspire will review your current cybersecurity environment, identify potential vulnerabilities, and provide recommendations on protecting your organization from attack using industry and company best practices. The assessment may include a deep dive into your hardware, software and monitoring efforts based on your current cybersecurity efforts.

✔ **Planning & Design of a Cybersecurity Program**
Using the Cybersecurity Assessment as an outline, Aspire will develop a detailed plan using next-generation technology to design a plan to strengthen your cybersecurity posture. All recommendations will be built on our extensive experience using the latest technology to protect your organization.

✔ **Implementation of Solutions Aligned with Processes and Procedures**
Aspire will assist in implementing your approved cybersecurity plan aligned with existing upgrade processes and accepted procedures for seamless integration of next-generation technology. We will help remediate preexisting playbooks and implement the necessary changes to strengthen your cybersecurity posture.

✔ **Internal User Training**
Aspire will provide your organization with appropriate training to teach your staff how to recognize various attack vectors. This includes phishing, spear phishing, social engineering and other common ways bad actors use to gain access to networks.

Aspire acts as an extension of existing IT teams by providing advanced security operations capabilities remotely delivered by dedicated security analysts with knowledge of our client's environments. This enables faster detection and remediation actions to safeguard vulnerable agencies and organizations effectively.
