

Bring more performance, agility, and value to your data center

Can your data center infrastructure keep up with the evolving demands of IT and your business? At Aspire, we enable you to stay ahead of those demands and build an IT foundation that's easy to support and get you ready for anything the future has in store for your organization.

Data Center challenges impacting your organization

Everything from complicated support to the growth and complexity of data is creating challenges in the data center for today's modern organizations – especially if you rely on infrastructure that's been pieced together over the years.

Multi-vendor support

When a problem arises, you have to deal with multiple vendors who will often blame each other.

Exponential data growth

Incredible amounts of data are being produced, entered, and processed within your systems.

Data complexity & diversity

80% of that data* is unstructured, which most infrastructures aren't built to handle effectively.

Security policy

Without the right security controls and policies in place, you're vulnerable to new security threats.

These lead to plenty of unintended outcomes:

1 Slow, painful technical support

2 Spiraling costs and wasted time

3 Inability to run new applications

4 Unauthorized data access

5 Bad user and customer experiences

6 Difficulty staying ahead of business needs

Let Aspire help you overcome your Data Center challenges

With FlexPod Converged Infrastructure for Modern Workloads and our technical expertise, we can help you transition to a data center infrastructure that offers the performance, agility, and value you need – with a converged, validated design that's supported by a single vendor.

FlexPod is trusted by 9,500+ companies worldwide. It's a converged architecture that's composed of pre-validated data center technologies from Cisco and NetApp to deliver:

A platform for innovation

Keep up with exponential data growth while also dramatically reducing your data center and on-going operational costs.

Unmatched versatility

Meet the needs of any workload and run them anywhere so IT can deliver services with the performance the business needs.

Simplified support

Benefit from full stack support from a single vendor and built-in functionality for backup, disaster recovery, security, and more.

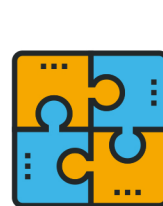

The value of partnering with Aspire

At Aspire, we offer extensive expertise in adopting the data center to today's dynamic, digital world. We'll work with you to determine what works best for your organization and help you better keep up with the evolving demands of IT.

Data center expertise

We deliver a full-suite of solutions that span from strategy to on-going management.

A solutions provider

We power business transformation for data-driven organizations striving to stay ahead.

Industry experience

We're well-versed in commercial, government, education, legal, and healthcare industries.

Consultative approach

We start by understanding your workloads before recommending any technology.

We act as an integrated extension of your IT organization delivering end-to-end management of your technology infrastructure.
