

Aspire Technology Partners Cyber Threat Intelligence Team

Aspire Technology Partners is excited to announce the launch of our dedicated Cyber Threat Intelligence (CTI) team as part of our ongoing commitment to enhancing your security. This new team will work closely with our Security Operations Center (SOC) to provide you with timely and actionable intelligence to strengthen your cybersecurity defenses.

Starting soon, you'll see updates from our CTI team posted in ServiceNow (SNOW). These updates will keep you in the loop whenever new intelligence is available. Our CTI team will serve as your primary source of information on a range of cybersecurity threats. You'll receive:

- **Emergency Flash Notices** - Urgent updates about vulnerabilities in software and servers that are currently being exploited in the wild or have a low attack complexity score. These notices will allow you to take quick action to protect your systems.
- **Threat Intelligence Reports** - In-depth, evidence-based analyses of emerging or existing threats, including insights into the motives, goals, and resources of adversaries. These reports will provide context on the evolving threat landscape, helping you understand the profiles and tactics of threat actors.
- **CTI Threat Briefings** - Briefings that give insight into the cyber threat landscape and are comprised of information that did not make it into an Emergency Flash Notice or a Threat Intelligence Report. The briefing provides current information regarding recent threats/vulnerabilities, threat actors, security breaches, and industry specific threats.

In addition to providing these reports/notices, our CTI team will actively hunt for and research emerging threats, ensuring you have the information you need to stay ahead of potential risks. Please visit [Aspire's Managed Services Customer Portal](#) for more updates and detailed reports from our CTI team.
